

## FILE UPLOAD PROCEDURE

Click on 'File Upload' at the top of the screen.

NOTE : *You must have an Owner/Operator account to access to the Upload function.*

***If you do not see*** the "file upload" button, it means that your Owner/Operator application has not yet been approved. Contact us if necessary.

# FILE UPLOAD PROCEDURE

Closely follow the instructions on the upload screen

## 1. Select fleet file upload option :

**Fleet in/Update:** Add new containers or update existing containers

**Fleet out:** Remove containers from your fleet, (they will still be accessible if already loaded by another operator)

**Fleet replace:** Your entire fleet will be deleted and replaced with the contents of the new file.

**Sold/scrapped:** Upload new container Sold/Scrapped warnings or deactivate the existing ones.

FLEET IN/UPDATE

FLEET OUT

FLEET REPLACE

SOLD/SCRAPPED

EXCEPTION ALERT

SECURITY ALERT

Upload new containers or update the existing ones.

The file must have the .csv format and match the following template :[Fleet In Template](#)  
Please note that the dates must respect the format "YYYY-MM-DD" and the decimals must be separated by dot:

0. Click here to download the upload file template

## 2. Select the delimiter used in your .csv file :

CSV delimiter

• ; tab

Upload a file

## 3. Select the file to upload

Browse your PC and select the files, you can select several files

Drop files here

## 4. Click 'Send' to start the upload :

## 5.Upload completed

You are immediately switched to following screen, and you will receive a mail reporting the result of the upload, with the number of containers successfully uploaded and the number of containers rejected with the reason for.

Cancel

Send

## FILE UPLOAD PROCEDURE

You can browse and select another file for loading

### 1. Select fleet file option.

If you had selected Fleet replace for the first loading, you must now select fleet update to add containers.

Select fleet out if you want to delete containers from your fleet.

*(Note : these containers may nevertheless remain visible in the database if they have been also loaded by another operator)*

## How to prepare the csv upload file :

You should pay attention :

**The line 1 of the file must always contain the headers**  
 The file may list up to 100 000 containers

In the case you have no data for one column, do not insert blank space or "0" or any character, leave the cell empty in Excel, or insert two delimiters in row if you build the file directly in .csv [ie : "," - in the case the delimiter is a "," (coma)]  
 As an alternative, you can delete the unused headers, make sure you respect the sequence between the headers line and your data when building your file

You cannot add new headers which are not already present in the headers line

The minimum data requirements are

- Container number
- Tare weight
- Maximum Gross Mass and/or Maximum Payload
- ISO Size-type and/or Group Size-type

All data must be present on each line of the file for each container

Respect the format of data as shown in the sample line of the template downloaded from the upload window  
*between others, respect the date format strictly : yyyy-mm-dd*  
*Your file cannot be loaded if the date is in an other format*

The decimal symbol is "." (dot)  
 DO NOT use "," (coma), the upload would fail

The delimiter can be either a coma ",", a semi-colon ";" or a tab [In the exemple above, we used "," (coma)]  
 DO NOT use "." (dot) as delimiter as it is used as decimal symbol  
Remember your choice of delimiter, you will have to specify it once in the upload windows
